DETAILED ACTION

Status of Claims

1. Claims 1-5 are pending.
Claims 1-5 are rejected.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on May 9, 2006 has been considered by the examiner, except for the reference by Geiger-Berschandy.
4. This reference fails to comply with 37 CFR 1.98(a)(3) because there is not a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, contained in this reference, since it is not in the English language.

Claim Objections

5. Claim 2 is objected to because of the following informalities: in line 11, the other parenthesis is missing in the electrophile formula.
Appropriate correction is required.

Art Unit: 1621

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the

Art Unit: 1621

inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

10. Claim 1 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Friedrich et al. (US 3,879,346).

Friedrich et al. teach and/or suggest a compound having the claimed formula (1) (see column 2, line 22 to column 3, line 26).

11. Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diederich et al.

Diederich et al. teach a process for preparing a protected alcohol by reacting an organometallic reagent of formula RCH_2M_1 with an electrophilic ether (see entire disclosure, in particular Scheme 1-24). The process of Diederich et al. differ from the instant process in the electrophilic ether used as starting material. However, one having ordinary skill in the art at the time the invention was made would have expected the analogous starting electrophiles to react similarly. Thus, the reaction proceeds in an expected manner and therefore the process is obvious.
